Introduction to HTML and CSS

HTML is used globally to format web pages and CSS can lend them a certain look and feel. We establish the basics of the language and unpack the use of forms and tables with different HTML attributes. This code is necessary to correctly display text, images and other elements. We demonstrate how to set up a website environment by investigating the structure and format of an HTML document, thus enabling you to use tags and multimedia on your web pages.

Modules Studied

Module 1: HTML and CSS

Module 2: Course assessment
